# FIBROBLASTING PLASMA TREATMENT

The Aurora™ 300 offers a non-invasive, soft surgical skin rejuvenation treatment. Our aesthetic procedure combines Warm and Cold Plasma energy to tighten and revitalize the skin.

The treatment requires minimum healing time, ideal for busy individuals looking to rejuvenate their skin without interrupting their daily routine.

The Cold Plasma module offers improved versatility and can be used to address a variety of skin conditions, such as acne and bacterial infection, as well as skin problems such as psoriasis, seborrhea, and rosacea.

## What is Plasma?

Plasma is made of a gas with some ionized atoms /molecules. A Plasma beam is comprised of a mix of reactive species (O3, NO, NO2). Plasma has superior disinfection properties and at the same time improves the underneath tissue's oxygenation and skin rejuvenation.

## Cold Plasma

Multiple and varied treatment options, including:

- Acne, bacterial and fungus treatment
- Skin stimulation and cell renewal
- Treatment of post-acne scars
- Treatment of stretch marks
- Skin tightening and firming
- Hair loss and regrowth treatment
- Increasing the absorption of active substances in the skin
- Treatment of skin problems such as psoriasis, seborrhea, rosacea

## Hot Plasma

### • Collagen stimulation

Plasma stimulates the fibroblast cells in the skin, promoting the production of collagen and elastin.

### • Wrinkles reduction

Plasma can help reduce the appearance of wrinkles and fine lines, particularly around the eyes, mouth, and forehead.

### • Scar reduction

Plasma may be effective in reducing the appearance of certain types of scars, including acne scars and stretch marks.

### • Skin tightening and lifting

Plasma treatments can be used to achieve skin tightening and lifting effects. The application of plasma can lead to the contraction of the skin, resulting in a firmer, more lifted appearance.

### • Non-surgical eyelid lift (blepharoplasty)

Plasma is often used for non-surgical eyelid lifts. By targeting the excess skin on the eyelids, the plasma energy can help tighten the area, reducing sagging and creating a more rejuvenated appearance.

## General Advantages

- Maximum efficacy. Combined hot /cold plasma treatment protocols for maximum efficiency.
- Versatility. Hot plasma and cold plasma modules offer multiple treatment options.
- Fast recovery time. The non-surgical plasma energy allows an extremely short healing time.

GENTLE AND SAFE APPROACH TO SKIN TREATMENT

# ABOUT NOVA PLASMA

Founded in 2012, Nova Plasma Ltd. is a global innovator in plasma-based technologies for both aesthetic and medical applications.

The Aurora™ Plasma Series features advanced, intelligent plasma systems exclusively for the beauty and aesthetic industry.

## The unique benefits of the AURORA300™

- Easy and simple to operate, alternative technology to surgery!
- The device was developed with the guidance of Miriam Zaretsky - a leading expert in the field of plasma.
- The treatment is accurate, comprehensive, and fast.
- Hot / cold plasma in one device for maximum efficiency.
- A dedicated set of interchangeable heads for multiple applications.
- Disposable treatment tips to prevent cross-contamination between patients.
- Fast return on investment.
